**Photographs by Peter Woodall QMS 009241 09/05/2008**

Open sclerophyll forest – woodland; predominant spp. Myrtaceous (*Eucalyptus*,  
*Corymbia*, *Lophostemon* spp.) and *Allocasuarina littoralis*

Leaf litter on ground throughout

1. Gilled Fungus – orange cap,
2. Gilled Fungus – orange cap, white stem, yellow after bruising: *Agaricus xanthoderma*?
3. Bolete in ground – pinky-brown cap, pink under –
4. Puff ball, creamy-white – on dead wood – twig 20mm diameter
5. Orange cortisioid fungus on sane twig as 4 above –
6. Bolete in ground – old, brown cap, yellow under – yellow-white stipe, swollen; in amongst leaf litter near termite mound.  
*Not collected.*
7. Light brown polypores 15 - 20mm on top – hexagonal pattern under – approx. 12 scattered within 1m radius of burnt stump.
8. Gilled Fungus – yellow-orange-brown cap, stipe – top half white, bottom half yellow – on dead wood 40mm diameter.
9. *Russula* sp. – pinky-red cap, white stipe; under *Leptospermum polygalifolia*, on northern side, on lower side of slope (W←E); 3 scattered in area
10. Bolete in ground – old, creamy-brown cap, brown under – black ooze where broken; considered very old. *Not collected.*
11. Bolete in ground – brown cap, brown under; stipe – light fluffy brown 4 within ½m of *Alphitonia excelsa* and *Leptospermum polygalifolia* and near *Pultenea villosa*.
12. Gilled Fungus – small, black cap; feathery around edge of cap – diameter 10mm; grey stipe. Approx. 10 at base of *Eucalyptus* sp. (Stringybark); all in decomposing wood (in moist ground).
13. Agaric – scaly, pale cream cap, green-yellow under, shaggy edge; stipe - white/cream turning reddish-brown where it meets cap
14. > 12 *Gymnopilus junonius*? – orange cap, orange-brown under ≤20mm.; on burnt stump 20 cm above ground
15. Fungus – same as 13, at base of *Eucalyptus* sp. (Stringybark). *Not collected.*
16. *Russula* sp. – pinky-red cap, white stipe; – on track (bare ground)
17. *Amanita ananiceps* (Young) – white, warty cap, creamy gills – 150mm diameter; white stipe bulbous at bottom; smaller immature specimen 6.5m to W.
18. *Boletus* sp. – pink mottled cap, 65mm diameter, yellow-brown (saffron?) under; stipe white/off-white, reddish-brown where stipe joins cap.
19. *Pycnoporus coccineus* on dead branch (45mm diameter) – 4 approx. up to from 10mm x 40mm *Not collected.*
20. *Russula* sp. – pinky-brown cap, 60mm diameter; off-white gills; stipe;
21. Small agaricus?– Little brown cap – 8mm diameter; stipe 15mm x 3mm
22. White puff ball – Chermside Hills
23. Fungus – yellowy-brown cap, yellow under, gills close and crowded (annexed?); stipe yellow – red mark near gills at base of *Xanthorrhoea johnsonii* ½ m to west. (*Russula* sp. also present.)
24. *Amanita* sp. – light brown-grey-cream mottled/marbled cap; white gills with brown/red bleeding; tight (very close) free; stipe reddish-brown between volva and annulus; pronounced bulbous shape at base.
25. *Russula* sp. – pinky-brown cap, – 26 *Austroboletus* sp. –
